POWERPOINT PRESENTATION I PORTFOLIO

Artificial Intelligence in Everyday Life

A clear, modern introduction to how AI supports the way we learn, work, and communicate.

A 5-SLIDE OVERVIEW

PORTFOLIO SAMPLE • POWERPOINT DESIGN

What is artificial intelligence?

AI refers to computer systems designed to perform tasks that normally require human-like abilities, such as recognizing patterns, understanding language, and making predictions.

LEARN

Find patterns in information

UNDERSTAND

Work with language and images

SUPPORT

Help people make informed decisions

AI is a tool: its value depends on how people design, use, and supervise it.

Where do we encounter AI?

01

Learning

Language practice, study support, and personalized explanations.

02

Communication

Translation, voice assistants, and message suggestions.

03

Healthcare

Support for analyzing information and organizing care workflows.

04

Daily services

Recommendations, navigation, and customer support tools.

Benefits — and what to watch

POTENTIAL BENEFITS

- Saves time on repetitive tasks
- Makes information easier to explore
- Can improve access to learning tools

IMPORTANT CONSIDERATIONS

- Check important information
- Protect personal and sensitive data
- Keep human judgment involved

The best results come from combining useful technology with human responsibility.

Use AI thoughtfully.

Artificial intelligence can make everyday tasks easier, open new ways to learn, and support better workflows. It works best when people stay curious, check results, and make the final decisions.

1. Explore
2. Verify
3. Decide

Thank you
